

GASBOX2

GASBOX2 is the updated version of the **exhaust gas analyser** for **petrol, LPG, methane engines** equipped with the analysis chamber designed by TEXA, now ever more performing. It can be combined with a **trolley** that allows moving it easily around the workshop. To guarantee a better dynamic of use, other than the traditional socket for a direct connection to the mains, GASBOX2 can be combined with **Power Pack**, a practical extractable module that can be charged separately. This solution allows having one or more batteries charged and always ready for use.

NP 01

NP 01 is a new generation tool that is used for the periodic technical checks on compression-ignition vehicles in some European countries.

More specifically, it is a **particle counter** developed using a **DC (Diffusion Charging) sensor** to measure the particles emitted from the engines within a size range between 23 and 200 nm.

The high-efficiency DC technology allows reaching high measuring standards and makes this device suitable for any need in inspection centres.

Robust and vibration-resistant, NP 01 integrates a **5" touch screen display** for a fast management by the user and a **Wi-Fi interface** to communicate with the viewer software. NP 01 is already arranged to run tests on spark-ignition engines, the next step for this type of checks.
